

Brentwood Health Profile 2007

This profile gives a snapshot of health in your area. With other local information, this Health Profile has been designed to support action by local government and primary care trusts to tackle health inequalities and improve people's health.

Health Profiles are funded by the Department of Health and produced annually by the Association of Public Health Observatories.

To view Health Profiles for other local authorities and to find out how they were produced, visit www.communityhealthprofiles.info

Brentwood at a glance

- Brentwood is an urban area of 71,000 people in the commuter belt of London. The population is growing relatively slowly, by comparison with the East of England. The population is older than average for the East of England with 1 in 5 being children, and 1 in 5 over 65.
- Reported violent crime rates are below average. Levels of statutorily homeless households are above average.
- Teenage pregnancy rates remain low. Although smoking in pregnancy and breastfeeding are important indicators of child health, there is a lack of robust data at local level.
- Estimated smoking rates are low but still exceed 1 in 5 adults. The estimated level of obesity is also below average but still affects nearly 1 in 5 adults.
- Both men and women can expect to live longer than average. Death rates from smoking, circulatory disease and cancer are low. Nevertheless 1 in 6 of all deaths is due to smoking.
- Women in the most deprived fifth of areas of Brentwood can expect to live 3.8 years less than women in the least deprived fifth.
- Road injury and death rates are higher than average.
- There are low rates of benefit claimants for severe mental illness, and low hospital admission rates for alcohol. Rates of recorded diabetes are lower than average.
- In Brentwood, the high death rate from road accidents needs to be tackled by the Brentwood Local Area Agreement (LAA).
- The growing older population will require that attention is paid to the falls prevention strategy within the Brentwood LAA.

Health inequalities: a local perspective

This chart shows inequalities in life expectancy (2001-05) at birth for men and women for the five local income groups presented in the map directly above.

95% confidence interval. These indicate the level of uncertainty about each value on the graph. Longer/wider intervals mean more uncertainty. When two intervals do not overlap it is reasonably certain that the two groups are truly different.

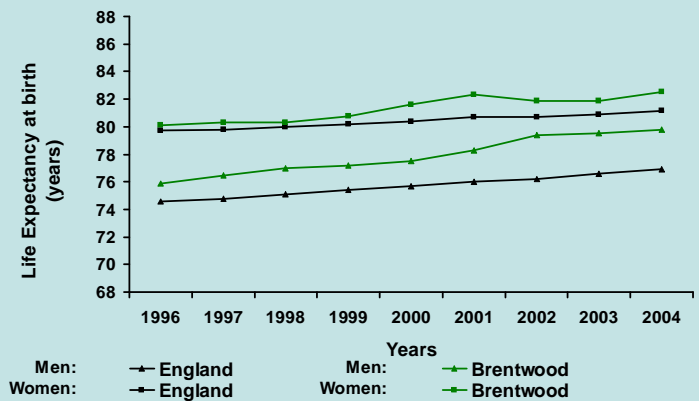

Health inequalities: changes over time

Trend 1 compares the trend in life expectancy at birth for men and women in this local authority with that for England.

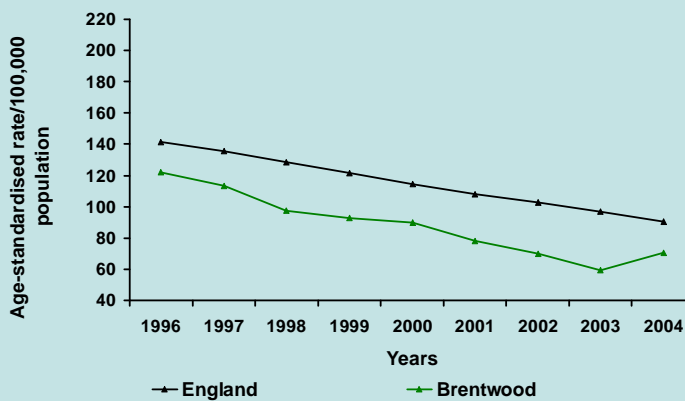

Trend 2 compares the trend in early death rates (all persons under 75 years) from heart disease and stroke in this local authority with that for England.

Trend 3 compares the trend in early death rates (all persons under 75 years) from cancer in this local authority with that for England.

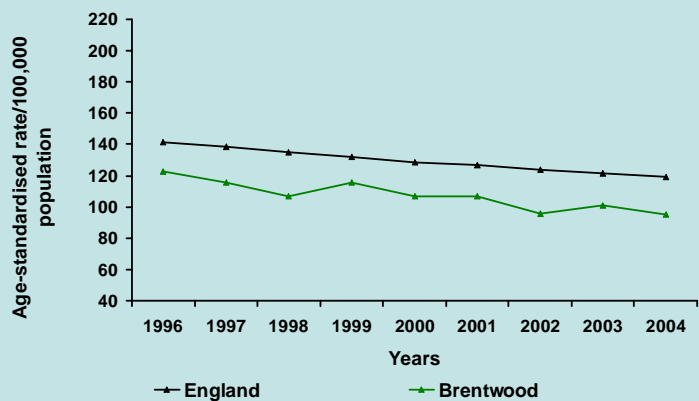

Trend 1:
Life expectancy at birth

Trend 2:
Early death rates from heart disease and stroke

Trend 3:
Early death rates from cancer

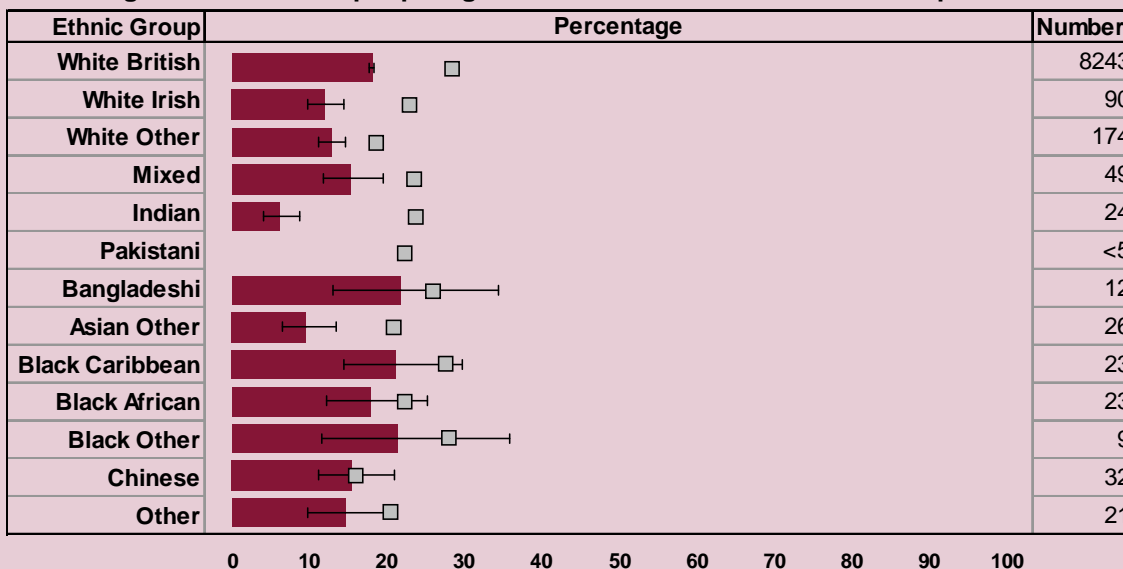

Health inequalities: ethnicity

This chart compares the percentage of the population of each ethnic group in the local authority who are in routine and manual occupations. People in these occupations have poorer health than those in professional

occupations, and are more likely to be smokers. The infant death rate is higher than average among babies born into this group. There are national targets to address these health inequalities.

Percentage and number of people aged 16-74 in routine and manual occupations

Note: This chart is based on the 2001 Census. Where the total population in an ethnic group in the local authority is less than 30, no data have been presented and the number column shows n/a. Where the number is less than 5, no percentage is shown.

Confidence intervals are shown for local data

Brentwood

Health summary for Brentwood

The chart below shows a number of indicators of people's health in this local authority. It shows the local value for each indicator compared to the England worst, England best, England average and Regional average. The circle indicating the local value is shown as amber if it is significantly better or red if it is significantly worse than the England average. An amber circle may still indicate an important public health burden. A white circle is not significantly different from the England average. For technical information about each indicator, see www.communityhealthprofiles.info
